REPORT

Date: 1-10-2024

A comprehensive lecture is conducted on biomedical waste management with the aim of enhancing awareness among Second BDS students .The speaker, Dr. T. Prashant, Sr. lecturer of Department of Public Health Dentistry, addressed the importance of properly handling, disposing of, and segregating trash while adhering to legal and environmental regulations during the seminar. The vast majority of participants gave positive feedback, many of them expressing improved understanding of safety procedures and a greater sense of confidence in managing biomedical waste. The program turned out to be a useful tool for raising knowledge and proficiency in the field of biomedical waste management. It emphasized the significance of managing waste effectively and offered doable solutions for safety and compliance. Going forward, the impact of these educational events could be further increased by adding more case studies and prolonging the practical training sessions. Overall, the course achieved its goals and gave participants greater skills for appropriately managing biomedical waste.
